- ✓ Business Analysis
- ✓ Enterprise
- ✓ ITIL and Service Management
- ✓ Privacy

FROM CYBER SECURITY TO PROJECT MANAGEMENT WE'VE GOT YOU COVERED

Widest range of training programs

ALC is an Australia-based market-leading provider of training in Enterprise IT for business and government, since 1994. Our focus is on professional certifications and the best-practice methods and frameworks that ensure you get the most out of your investment in IT.

Browse through this portfolio to see our extensive range of training programs. Courses are available either Face-to-Face or in Live Virtual format. Choose the course you want from the public schedule on our web or else we can organise a private presentation just for your team.

Outstanding Trainers

Many things go into making a great training course. But the most important is always the trainer. Our reputation is based on the quality of our trainers. We bring you the best - people with extensive real-world experience who have distinguished themselves both as subject matter experts and as training professionals. Please take a look at the Faculty page on our web.

Top Value

Quality usually comes at a premium, but we work hard to be able to offer our courses at very competitive prices. If you have teams to train, we have many options to make your training as cost-effective as possible, for both organisations and individuals.

Great Customer Service

Training for us is not a sideline activity – it is all that we do. And we have been doing it since March 1994. In that time we have seen many training companies come and go. To be a market leader all this time, we must be doing something right. We are a team of dedicated and capable people who care about what we do. We give it single-minded focus. We offer commitment, professionalism and enthusiasm.

CYBER SECURITY PROFESSIONAL

Cyber Security Foundation+Practitioner™

5 Days

ALC's flagship 5-day Cyber Security Foundation+Practitioner™ is the standout course for anyone who needs a sound understanding of Cyber Security and a solid base on which to build their career. It is the ideal course with which to upskill your team. Proven over many presentations, the course features a robust syllabus with a strong emphasis on practical exercises to reinforce understanding.

CISSP® Certified Information Systems Security Professional

5 Days

CISSP® is long regarded as the gold standard of security qualifications. This intensive 5-day course provides information security professionals with a fully-immersed, minimum-distraction training experience that will broaden and deepen understanding of all CBK domains.

CISM® Certified Information Security Manager

4 Days

CISM® defines the core competencies and standards of performance expected of a world-class information security manager. It provides executive management with the assurance that those who have earned their CISM have the experience and knowledge to offer effective security management and advice.

CISA® Certified Information Systems Auditor

5 Days

CISA® is the global standard among information systems (IS) audit and control professionals. Possessing the CISA designation demonstrates proficiency and is the basis for measurement in the profession. The course comprehensively covers the full CISA syllabus and prepares for the CISA exam..

CCSP® Certified Cloud Security Professional

5 Days

Attackers never rest, and along with all the traditional threats targeting internal networks and systems, an entirely new variety specifically targeting the cloud has emerged. The six domains of CCSP® provide a thorough coverage of the security risks and mitigation strategies critical to data security in the cloud.

SABSA® Foundation

5 Days

Getting your architecture right is key to effective security. SABSA® is the world's most successful security architecture and ensures that the security needs of your organisation are met completely and are designed, delivered and supported as an integral part of your IT management infrastructure.

SABSA® Advanced A1: Risk and Assurance

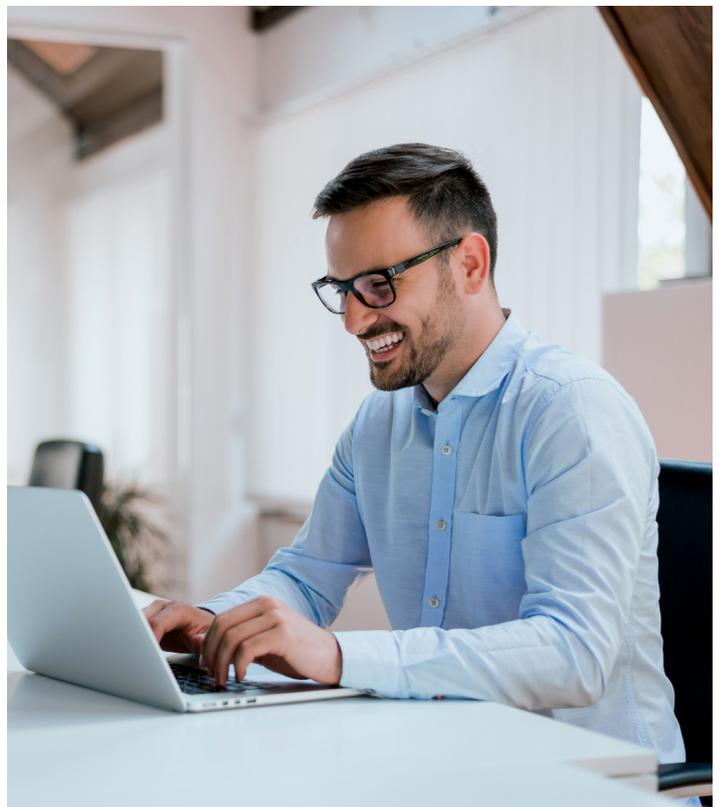

5 Days

Develop practical advanced competency to architect Business Risk, Assurance and Governance structures and processes in the SABSA context.

SABSA® Advanced A3: Architecture and Design

5 Days

Develop practical advanced competency to plan, design, implement and manage a SABSA Architecture and its through-life processes.

STANDARDS | NEW

NIST Cybersecurity Framework Practitioner®

5 Days

ALC's 5-day NIST Cybersecurity Framework Practitioner (CFP) course is designed for information security professionals who wish to gain an understanding of the NIST Cybersecurity Framework and its application. The course immerses participants in all aspects of the theory behind the framework, but applies a regional flavour on how the framework can be applied to an Australia or New Zealand context through the use of a case study.

ISO 27001 Foundation

2 Days

ISO 27001 Foundation training allows you to learn about key concepts and the Information Security Management System and its conformance requirements in a simple and pragmatic way. The course will also demystify some of the common misconceptions of being ISO27001 certified.

ISO 27001 ISMS Lead Implementer

5 Days

ISO 27001 is the international standard for effective Information Security Management Systems. This course provides comprehensive coverage of all aspects of an ISO 27001 project for implementing and maintaining a successful Information Security Management System.

ISO 27001 ISMS Lead Auditor

5 Days

ISO 27001 is the recognised international standard for best practice in information security management systems (ISMS) within any organisation. This course will prepare you to plan and execute audits of information security management systems in line with the international standard ISO/IEC 27001.

PEN:200 Penetration Testing with Kali Linux

Bootcamp: 5 Days | Self-Paced Online Subscription

The industry-leading Penetration Testing Certification – OffSec's PWK/PEN-200 (OSCP) course introduces penetration testing methodologies, tools, and techniques in a hands-on environment. OSCP is the only certificate that matters if you want a career in Penetration Testing. It is highly desirable for employers as it demonstrates practical skills and help develop an adversarial mindset.

CyberSec First Responder™

2 Days

This course will equip the organisation's IT staff members with the capability and knowledge to be able to respond to an incident in an effective and timely manner. Knowing how to act promptly during an incident can significantly reduce the incident's negative impact and ensure that an incident response investigation can be performed without delay. The two-day training will introduce attendees to various open source and free tools that can be used to capture and analyse artifacts that are critical during an incident investigation.

Secure Software Development Foundation

2 Days

The Secure Software Development Foundation Course covers the best practices any software developer needs to know in order to be able to develop applications that minimise exposure for users, customers and organisations to attack. The skills and knowledge acquired will help ensure participants will be able to build higher quality, more robustly protected applications. There are no formal prerequisites for this course.

The ACSC Essential 8

2 Days

The ACSC Essential Eight is a series of eight technical recommendations designed to work in tandem to mitigate the risks of potential data breaches. Developed and maintained by the Australian Cyber Security Centre (ACSC) the Essential Eight is the minimum baseline of cyber threat protection recommended by the Australian Signals Directorate. This two-day workshop provides a comprehensive coverage of the Essential 8 and what you can do to help ensure your organisation meets the requirements. Also available as a one-day or half-day in-house presentation

GRC GOVERNANCE, RISK, COMPLIANCE

CRISC® Certified in Risk and Information Systems Control

3 Days

CRISC® prepares and enables IT professionals for the unique challenges of IT and enterprise risk management and positions them to become strategic partners to the enterprise. This course comprehensively covers the full CRISC syllabus and prepares for the CRISC exam.

COBIT® 2019 Foundation

2 Days

The just-released COBIT 2019 is the best COBIT yet, featuring many positive changes including modified principles, new design factors, updated goals cascade, modified processes (from 37 to 40), updated performance management, new detailed governance and management objectives.

CGEIT® Governance of Enterprise IT

3 Days

The CGEIT® certification is the world-leading vendor-neutral certification designed for IT professionals in large organisations who are responsible for directing, managing and supporting the governance of enterprise IT. CGEIT® recognises a wide range of professionals for their knowledge and application of principles and practices of governance of enterprise IT.

\ **Very well done for an online course.** I really liked the use of a doc cam next to the slide deck to talk through material and annotate slides to make a point. I found it really clarifying and easy to follow. Great course material and experience. Very communicative. **The best online training course I have found in terms of communication and professionalism.** ALC really try to make the online course format work and put a lot of effort into how they do things. The ALC courses I have attended online are the best online courses I have found. ALC and their trainers are very professional and have put thought into the online training experience.

\ **What an interactive training it was.** I can't wait to incorporate what I learned for a productive result. The trainer presented the course content in an engaging and knowledgeable way, which primarily enabled me to understand and appreciate the subject matter. It was fun and engaging to learn! Real life sample was appreciated for us to relate the topics new to us.

\ My trainer is excellent and experienced. It really helps me understand the module, which is wonderful. Course is interactive. **The case study and exercises are helpful to understand the framework better.**

\ Initially I was hesitant that this was online/virtual and not in person as I was concerned about my attention span being at home rather than in a classroom but **the trainer was super engaging and everything ran very smoothly. 10/10 :)** He was amazing, well presented and deep dived into a lot of technical and managerial aspects of cyber security.

\ **The trainer was excellent at exam prep.** I really felt this was beneficial and I appreciated it greatly. The trainer is a very experienced instructor and always uses many interesting examples while he was explaining to us. This was my second ALC course that I have done. I have learnt a lot in both instances and I look forward to having another opportunity in the near future.

WHAT OTHERS HAVE HAD TO SAY ABOUT US!

ADVANCE YOUR CAREER

WHAT YOU GET WHEN YOU TRAIN WITH ALC

QUALITY. Many things go into making a great training course but the most important is always the trainer. Everyone claims they have great trainers. What we can say is that we have a long history of sourcing the best. That has been our business model for more than 30 years. For certain subjects our trainers are in fact world leaders. And for other subjects they are all outstanding – people with extensive experience who have distinguished themselves as training professionals over many years. They are enthusiastic about what they do and make learning an engaging experience.

RELIABILITY. We have a proven track record of helping more than 60,000 people in the region pass their exams.

VALUE. Quality usually comes at a premium but we work hard at all levels to ensure competitive pricing. Whether you're a small, medium or large organisation or a private individual, we make sure you get excellent value for your money.

CUSTOMER SERVICE. Our team is totally committed to providing the best customer service at all times. We will walk that extra mile.
