

Put Privacy by Design Into Practice

BE AT THE FOREFRONT OF DATA PRIVACY

CDPSE™ is the only certification built for engineers and technologists implementing privacy-by-design solutions.

Take a proactive approach to data privacy with the credential that shows your expertise in implementing privacy controls across your enterprise systems.

Demonstrate your ability to implement comprehensive privacy solutions and work cross-functionally to ensure best practices and legal and regulatory compliance.

Passing the CDPSE exam proves your ability to implement privacy controls into existing and future systems, networks and applications, as well as your experience in the unique and human-centered field of Data Privacy. You'll be recognized for delivering data privacy guidance and implementation across key practice areas, including:

1 Privacy Governance—effectively identify and manage personal information.

Confirms your ability to handle personal information and execute privacy operations in accordance with legal requirements and privacy-by-design principles.

2 Privacy Risk Management and Compliance—assess privacy risk, threats and vulnerabilities.

Demonstrates your ability to evaluate and respond to risk, perform privacy impact assessments (PIAs), and implement privacy frameworks to maintain compliance.

3 Data Life Cycle Management—design and enact technical and operational data controls.

Validates your skill in implementing technical data collection, processing, storage, and destruction solutions that align with privacy best practices.

4 Privacy Engineering—implement privacy technologies and controls proactively across enterprise platforms.

Proves your ability to design, develop and administer systems, applications and infrastructure that follow privacy-by-design principles.

A privacy credential for professionals who meet these standards:

- Have three or more years of professional work experience across the four CDPSE domains.
- Successful completion of the CDPSE exam.

Prioritize privacy in today's data-driven AI solutions.

Privacy professionals must be able to understand cutting edge technologies to maximize the utility of data-driven solutions. They are also required to have the technical skill to design and implement privacy solutions that enable organizations to utilize data in powerful and innovative ways while maintaining compliance and customer trust. CDPSE helps you rise to this occasion, proving your expertise and experience in implementing privacy controls in data-driven platforms and applications.

Security is a prerequisite to privacy. In an age when privacy budgets are shrinking and regulation is growing, security and privacy professionals can no longer stay siloed. CDPSE offers the technical skill and validation necessary to build privacy directly into systems and processes, reducing risk and costs and demonstrating cross-functional value that makes you essential

ISACA's CDPSE certification qualifies you to meet this transformative moment by empowering you to:

- Assess and implement comprehensive technical privacy solutions.
- Embed privacy by design into platforms, products, and processes, ensuring compliance, operational efficiency, cost-effectiveness, and a strong commitment to protecting customer privacy.
- Work cross-functionally with legal, policy, database administrators, engineers, software developers and back-end and front-end experts.
- Remain forward thinking and adaptive to technical changes needed due to new compliance requirements.
